

NAFLM 2025

Coach & Administrator Guide

A practical guide to playing, coaching, and running a league on the NAFLM 2025 platform — including the BB2025 Sevens variant and the full set of league administration tools.

Based on NAFLM 2025 (Blood Bowl Third Season rules, incl. Sevens)

Coach Guide

1. Introduction

NAFLM 2025 is a Blood Bowl league management system built on OBBLM (Online Blood Bowl League Manager), updated for the Blood Bowl Third Season rules (including the Sevens variant) and maintained for the NAF, the worldwide Blood Bowl players' association. It runs your league's website: team rosters, match reporting, skill and stat progression, standings, and league administration all live in one place.

This guide walks through the site from a coach's point of view first — registering, building a team, playing and reporting matches — and then covers the full set of tools available to league commissioners and administrators.

WHO IS THIS FOR?

Any coach playing in a league hosted on NAFLM 2025 (such as naflm.net), and any commissioner or admin running one.

2. Getting Started

2.1 Registering

Coaches can self-register: click **Register** on the login box to create your own account. Your account won't go live until a league admin approves it, so there may be a short wait before you can log in and get started.

Separately, if you want to set up a brand new league, use **Request a League** from the site's *Home* menu.

2.2 Logging in

Use the **Login** link in the top menu. Once logged in, a new **User Menu** appears in the top navigation with quick links to:

- Create a New Team
- Schedule Match
- Coach's teams
- Profile
- Statistics
- Recent matches
- Logout

You can tick **Remember me** at login to stay signed in between visits.

The top navigation bar, logged out, showing the Login/Register box

3. Understanding League Structure

NAFLM organizes everything into a hierarchy:

Level	Purpose
League	The top-level container. Teams in different leagues can never play each other.
Division	A grouping within a league. Most leagues only need one division and don't need to separate divisions from each other ("division ties").
Tournament	A container for matches within a division. There are two types (below).
Conference	An optional grouping of teams <i>within</i> a tournament (see 3.2) — it doesn't replace or sit alongside divisions, it subdivides a single tournament.
Match	An individual game between two teams.

3.1 Formats: Blood Bowl and Sevens

Every team is created in one of two **formats**, chosen at team creation and shown on the team's info box afterward:

- **Blood Bowl (BB)** — the standard 11–16 player roster, standard costs, standard skill/stat progression.
- **Sevens (SV)** — a smaller-squad variant: 7–11 players, a maximum of 4 positionals (non-linemen), a separate starting treasury, and different pricing for re-rolls, Apothecary, and sideline staff. See Section 5 for the full set of differences, and Section 5.8 for the Sevens-only **Veteran** mechanic.

A league can disable Sevens team creation entirely (see Section 10, League Preferences), in which case the Sevens option simply won't appear on the team creator.

3.2 Conferences

Where the Conferences module is enabled, it lets you group teams into named conferences *within a single tournament* — for example splitting one big Round Robin tournament into "Conference A" and

"Conference B" pools. It doesn't replace divisions; it's a finer-grained grouping used inside one tournament, for leagues that want sub-groupings without setting up a whole separate division.

3.3 Tournament types

- **Round Robin (RR):** every team plays every other team once per "bracket". A bracket can be seeded more than once; home/away pairings swap each time it's re-seeded. With an odd number of teams, each team gets one bye per round.
- **Free For All (FFA):** matches are scheduled on demand rather than as a fixed bracket. Selecting two teams schedules a single match; selecting more shuffles the list into random pairings. FFA tournaments can also be used to run knockouts or other custom formats by scheduling matches manually.

NOTE

You are never restricted to playing matches in their listed order — any scheduled match can be played and reported whenever the two coaches are ready.

4. The Coach Corner

Once logged in, your personal area (reached from the User Menu, or via your coach profile page) lets you:

- Create new teams
- Edit your coach name, email, and password
- View your profile, stats, and recent matches

GOOD TO KNOW

Teams that have already played matches cannot be deleted, and cannot be transferred to another coach or another league by a regular coach — this protects the integrity of league statistics. A team can only be deleted while it has no completed or scheduled matches. (An admin can still transfer a team — see Section 17.)

5. Creating and Managing Your Team

5.1 Creating a team

Use **Create a New Team** from the User Menu. At this stage you:

- Choose a **race** from the roster dropdown — every current BB2025 roster is listed, plus Teams of Legend and the optional Slann roster where your league hasn't disabled them.
- Choose the **format**: a **Blood Bowl / Sevens** toggle sits right next to the race dropdown. Switching it updates the roster preview *live, with no page reload* — re-roll, Apothecary, assistant coach, cheerleader and Dedicated Fans costs all change instantly to the Sevens pricing (see table below).
- Give the team a **name** — team names must be unique across the whole site, so you'll be asked to pick another if yours is taken.
- Pick the **League/Division** to create the team in.

Team Creator

Race: Format: ☒ Blood Bowl ☐ Sevens Team Name: League/Division: Create # Players: 0 Total (k): 0

Position	Keywords	MA	ST	AG	PA	AV	Skills & Traits	Primary	Secondary	Cost (k)	Qty	Subtotal

Minotaur	(Big Guy, Minotaur)	5	5	4+	6+	9+	Frenzy, Horns, Loner (4+), Mighty Blow, Thick Skull, Unchannelled Fury	MS	AG	150	0	
Dedicated Fans (Note: you will automatically get 1 for free)								Rerolls		50	0	
										5	0	
								Cheerleaders		10	0	
								Ass Coaches		10	0	
								Apothecary		50	0	

The Team Creator page with a race selected, showing the roster/cost table (Blood Bowl format)

Team Creator

Race: Format: ☐ Blood Bowl ☒ Sevens Team Name: League/Division: Create # Players: 0 Total (k): 0

Position	Keywords	MA	ST	AG	PA	AV	Skills & Traits	Primary	Secondary	Cost (k)	Qty	Subtotal
Goblin Bruiser	(Goblin, Lineman)	6	2	3+	4+	8+	Dodge, Right Stuff, Stunty, Thick Skull	AD	GPS	45	0	
Black Orc	(Blocker, Orc)	4	4	4+	5+	10+	Brawler, Grab	GS	AD	90	0	
Trained Troll	(Big Guy, Troll)	4	5	5+	5+	10+	Always Hungry, Mighty Blow, Projectile Vomit, Really Stupid, Regeneration, Throw Team-Mate	S	AGP	115	0	
Dedicated Fans (Note: you will automatically get 1 for free)								Rerolls		100	0	
										20	0	
								Cheerleaders		20	0	
								Ass Coaches		20	0	
								Apothecary		80	0	

The same page with Sevens selected as the Format — note the Sevens-specific roster and the Ass Coaches / Dedicated Fans / Cheerleaders / Apothecary pricing

Everything else in this section — hiring more players, buying goods, rolling for skills and stats, and so on — happens afterward, from the team's roster page.

Sideline staff / item	Blood Bowl cost	Sevens cost
Re-roll	Race's normal cost (varies by roster), doubles after the team's first match	100k flat, same for every race, never doubles
Apothecary	50k flat	80k flat
Assistant coach	10k flat, up to 6	20k flat, up to 3
Cheerleader	10k flat, up to 6	20k flat, up to 3
Dedicated Fans	1 free, plus up to 2 more at creation (3 total)	1 free, plus up to 1 more at creation (2 total)

Apothecary, assistant coaches, and cheerleaders are flat prices set by format, not by race — only the re-roll cost varies from roster to roster. Both formats start every new team with one Dedicated Fan for free;

the table above shows how many more you can add on top of that at creation.

SEVENS

Sevens rosters are capped at **4 positionals** (non-linemen); the team creator enforces this automatically once you switch the format toggle to Sevens.

5.2 Selecting a team rule

Some rosters offer a choice of **team rule** (for example, alternative special-rule variants of the same race) which determines which Star Players and other options are available to that team. Where your roster has a choice, select it from the team page after creation — do this early, since it affects which stars you'll be able to hire later.

TEAM CAPTAIN

If your team has the Team Captain rule, a **Select team captain** action appears in your Team management box. Any rostered player can be made captain except Big Guys, and only one captain can be selected at a time. In Blood Bowl, becoming captain grants the player the **Pro skill** (shown as "Pro (Captain)" next to their name) with no change to their stats or cost. A captain can't be fired unless they've picked up a permanent stat injury; once a captain is removed — fired after such an injury, or dies — a new captain can be selected.

5.3 Hiring players

From your team page, use **Hire player/Journeyman** in the Team management box to buy a player from an available position. You can also hire a player **as a journeyman** if your roster is short of the minimum (11 for Blood Bowl, 7 for Sevens) — like any other hire, this can be un-hired again for as long as the player hasn't played a match yet (see 5.4). If your league enforces hire/fire order (5.5), that option locks out once you've fired anyone since your last match.

The screenshot shows a web interface titled "Team management - test orc". At the top is a dropdown menu set to "Hire player/Journeyman". Below this is a "Description:" section with the following text: "Hire a new player. Also, hire a new journeyman. Hiring a player as a journeyman is free, but only players from a 0-16 allowed position on your team's roster are hire-able as journeymen. Tick the Journeyman? box to hire a new journeyman at no cost." Below the description are three input fields: "Player:" with a dropdown showing "50k | Orc Lineman", "Number:" with a dropdown showing "13", and "Journeyman ?" with an unchecked checkbox. There is also a "Name:" text input field. At the bottom left of the panel is an "OK" button.

The Hire player/Journeyman panel on a team's own page

5.4 Firing, retiring, and un-hiring players

The Team management dropdown on your team page adapts to what's currently possible for your roster — for example, **Fire player** only appears once firing wouldn't drop you under your format's roster minimum, and **Let go of team goods** only appears once you actually own goods to sell back. Don't be surprised if an action you expect isn't listed; it usually means it isn't currently valid for your team's state.

- **Fire player** — refunds a portion of the player's value back to your treasury. If your league has a **minimum team value** setting enabled, the site will block a fire that would drop your team value below that floor, and will tell you the projected TV so you can see why.
- **Temp retire player** — benches a player without firing them; they stop counting toward your active roster but aren't sold.
- **Un-hire player** — reverses a hire, refunding the price paid. This is only available for a player who hasn't played in a match yet; once they've appeared in even one match, the hire can no longer be undone this way.
- **Expensive mistakes** — once your treasury reaches 100k or more, this lets you roll on the Expensive Mistakes table (the official BB2025 rule for teams sitting on too much gold between matches). It's only offered once your treasury actually clears that threshold; the panel shows your current treasury so you can see how close you are.

MNG PLAYERS

You can't fire a player if it would drop you below 11 players eligible for your next match. An MNG player isn't eligible for that next match, so they don't count toward that 11 — if excluding them brings your eligible count to 11 or below, the site will block you from firing any other (non-journeyman) player until it clears again.

JOURNEYMEN AND THE FIRE PLAYER ACTION

Journeyman are always fireable through **Fire player**, in both formats — they're never subject to the hire/fire order, the roster-floor check, or the minimum-TV check that can block firing a regular player. The difference in Sevens is that **Fire player** only ever lists journeymen; a regular (non-journeyman) Sevens player can't be fired through this action at all. In Blood Bowl, the same action lists any eligible player, regular or journeyman, subject to the gating above for non-journeymen.

5.5 Hire/fire order enforcement (if enabled by your league)

Some leagues turn on strict ordering for post-match roster changes: hire first, then fire, then buy staff/goods, then hire journeymen for the next match. If your league has this switched on, the site tracks which phase you're in based on your most recent match and what you've already bought or sold since then, and will only offer the actions valid for your current phase. If you don't need to hire anyone, you can skip straight to the fire phase.

5.6 Buying and selling team goods

From the team page you can buy and sell staff and equipment such as re-rolls, an Apothecary, assistant coaches, cheerleaders, and Dedicated Fans, via **Buy team goods** and (once you own something to sell) **Let go of team goods**. Dedicated Fans purchases beyond your free starting one are capped at creation time — 2 more for Blood Bowl, 1 more for Sevens — see the table in 5.1.

5.7 Player skills and stat improvements

When a player earns enough Star Player Points (SPP), you can spend them on a skill or a characteristic increase from their team page:

- **Skills** can be **chosen directly** — a Primary skill, or with enough SPP a Secondary (doubles) skill, from the normal/doubles list — or rolled for randomly (2D6, giving two options to choose between). A random skill roll always draws from the Primary list only; rolling a Secondary skill isn't possible.
- **Characteristic increases** are never chosen directly — they're always **randomly rolled** (a D8-based roll across MA/ST/AG/PA/AV), subject to the normal caps and a maximum of two random characteristic increases tracked per player.

What your league configures (League Preferences, Section 10) is how a random roll gets made, and this applies to skill rolls and stat rolls alike:

- **Automated Rolling:** the site itself performs the roll for you from the Team management box, offering two options to choose between.
- **Manual Rolling:** the coach rolls physical dice at the table (typically at the end of the match) and enters the resulting skill or characteristic increase directly — for leagues that prefer to roll for real rather than on the site.

ANTI RE-ROLL PROTECTION (AUTOMATED ROLLS)

Automated random rolls are recorded server-side as soon as they're generated. If you refresh or navigate away before confirming your choice, the site remembers the roll and re-shows the same two options rather than letting you roll again — the roll is only marked "confirmed" once you actually pick one of the two offered skills.

SEVENS

In Sevens, only **one player per team** can advance after a match. On the match report, use the **Misc SPP** box to assign SPP to that one player (see 6.3), using the "Next Skill x/y SPP" figure shown against each player as your guide.

5.8 The Veteran mechanic (Sevens only)

A Sevens team can appoint/select a **Veteran**: a lineman-only appointment, chosen from the team page, that grants the Veteran trait and a **permanent -1 Movement Allowance** to that player (representing a grizzled veteran who's taken one too many hits). A Veteran must be a lineman — the position dropdown for selecting one is filtered accordingly.

Sorted against: +nr, +name

A Sevens team's roster row showing the Veteran skill and the -1 Ma penalty

5.9 Other player and team actions

- Rename or renumber a player
- Rename your team
- Select your team captain (or Veteran, on a Sevens team)
- Set your team's "ready" state, retire the whole team, or delete it (only if it hasn't played)

5.10 The team page submenu

Your team's page has its own submenu with several tabs beyond the main roster/management view:

- Management & Stats** — the default tab: your roster and all the hire/fire/skill actions covered above, plus (if you're an admin or commissioner) the per-team admin override tools described in Section 17.
- News** — post short text updates about your team, visible on your team's public page. You (or your commissioner) can edit or delete existing posts from the same tab.
- About** — upload and manage your team's logo and stadium image, along with any free-text "about" description for the team.
- Recent & Coming Games** — a list of the team's recent and upcoming matches. This is a convenient second way to jump straight into submitting or reviewing a match report, alongside the main *Matches* menu.
- Star Hire History** and **Mercenary Hire History** — a log of every Star Player and mercenary your team has hired for matches over time.
- Inducements try-out** — a sandbox where you can experiment with picking inducements for an upcoming match (spend a hypothetical inducement budget, see what you could afford) without it affecting your team for real. The list of inducements offered is filtered to your team's format, so a Sevens team only sees Sevens-priced/available inducements. Useful for planning before a game.
- Vis. stats** — a visual graph of the team's statistics over time, where the statistics graph module is enabled.
- Cemetery** — a memorial list of the team's dead players, where the Cemetery module is enabled.
- PDF** — generates a printable PDF of your current team roster.

6. Scheduling and Playing Matches

6.1 Scheduling a match

Use **Schedule Match** from the User Menu (this is available to regular coaches only in FFA tournaments that your commissioner has marked as open to coach-scheduling; Round Robin brackets are seeded automatically by an admin).

6.2 Submitting a match report

After a game, either coach can enter the result via **Matches** → **Tournaments**, opening the relevant fixture. Only the two participating coaches and your league's commissioners can edit that report. Key things to know:

- **Casualties are broken down by type** (badly hurt, seriously injured, killed) rather than lumped together as plain kills.
- **Hatred** can be gained during a match: if a player suffers an injury of MNG or worse, roll a D6 — on a 4+ they gain Hatred of one of the non-positional keywords carried by the player who caused the injury. Record it by selecting that keyword from the dropdown next to the injured player on the report.
- **Extra stats** (beyond the core report) are submitted on a separate page linked from the primary report — submit the primary report first.
- **Income** is not calculated automatically — you enter the net treasury change yourself, accounting for spiralling expenses, inducement spend, star player/mercenary hire costs, winnings, and any sponsorship.

Match report column abbreviations — the report uses a number of abbreviated column headers. Per-player columns:

Column	Meaning
MVP	Most Valuable Player
CP	Completions
TD	Touchdowns
INT	Interceptions
BH	Badly Hurt caused (to an opposing player)
SI	Seriously Injured caused (to an opposing player)
KI	Kills caused (to an opposing player)
Misc SPP	Miscellaneous/manually awarded Star Player Points
Inj	The injury this player themselves sustained during the match
Hatred	The keyword this player gained Hatred of during this match, if any (see 6.2)

Team-level summary columns (these appear on-screen using their full names rather than abbreviations):

Column	Meaning
Score	Touchdowns scored by the team in this match
Δ Treasury	Change in the team's treasury for this match
Dedicated Fans	The team's Dedicated Fans count
Sportsmanship & Manual Bonus points	A manually entered value covering sportsmanship and any other ad-hoc bonus points
Additional League Points	Automatically calculated bonus points — see Section 6.5
Total team CAS	Total casualties caused by the team
Fan Factor	The team's Fan Factor
CTVs	Current Team Value (post-match)

match report text

A completed match report page

Δ TREASURY CAN BE NEGATIVE

This field is a **delta** (the change since the last match), not a running total — and it can be a negative number. If a team's expenses for this match outweigh its winnings — inducement spend, star player/mercenary hire costs, a manually-rolled spiralling expense, and so on — enter the net change as negative, the same way you would enter it as positive when winnings come out ahead.

RE-SAVING A REPORT — UP TO A POINT

If you spot a mistake — a wrong score, a wrong treasury change — you can go back and correct the fields. However, this should only be done *before* either team has played their next match. The system doesn't physically lock a report once a later match exists, but editing it at that point is liable to throw off team value, treasury, and stats that have already moved on from it. Treat it as off-limits once a later match exists, and speak to your league admin if a correction is genuinely needed after the fact.

DON'T DELETE PLAYED MATCHES

Deleting a match that has actually been played will corrupt player, team, and coach statistics. Deletion should be reserved for matches that were scheduled or submitted by mistake. (An admin has a dedicated, safer Reset/Delete/Lock control for this — see Section 18.)

6.3 Sevens match reports: Draft Payoff and single-player advancement

A Sevens match report replaces most of the standard per-player columns with a shorter set, and adds instructions specific to the format:

- Only **Position**, **Draft Payoff**, **Misc SPP**, **Inj**, and **Hatred** are shown per player — the Cp/Td/Int/BH/SI/Ki/Ageing/MVP columns used in standard Blood Bowl reports are hidden.
- As covered in 5.7, only **one player per team** may advance after a match. Assign that player's SPP in the **Misc SPP** box, using the "Next Skill x/y SPP" hint next to each player (x for a Primary skill on a chosen player, y for a Secondary skill on a random player). All skill advancements are still randomly chosen from three skills (two picked by your coach, one by the opposing coach) — you nominate the player and the skill options, then roll after the game to see which applies.
- **The Draft:** after every match, roll a D6 for every player who has ever gained an advancement. Unless the roll beats the number of skills that player has achieved, that player is drafted away to the big leagues — mark them as DEAD in the Injury box — unless you pay their Current Value to keep them. If you pay to keep them, tick **Draft Payoff** for that player, which triggers a permanent 15k increase to their value; the payment itself isn't deducted automatically, so remember to manually adjust that match's Δ Treasury (6.2) to account for it.

Instructions for Sevens Matches

In Sevens only one player can gain an advancement after a match. Please use the 'Misc SPP' box to assign SPP to ONE player per team.

Use the 'Next Skill x/y SPP' information next to each player to determine how many SPP to assign: x for a Primary skill (on a chosen player) or y for a Secondary skill (on a random player).

Please note that although you can choose a player to advance (Primary skill only), all skill advancements are randomly chosen from 3 skills: 2 chosen by the coach and 1 by the opposing coach, so you must pick those skills and roll for which one applies post game.

After you assign the relevant SPP to the relevant player you will be able to assign the skill on the team page.

Remember also to roll for "The Draft" - after every match roll a D6 for every player that has extra skills: unless the roll is higher than the number of skills the player(s) achieved, they will leave your team for the big leagues (mark the player(s) as DEAD in the Injury Box) UNLESS you pay them their Current Value (deduct that from your Winnings/Treasury). If you do, tick the Draft Payoff box for that player to trigger a 15k increase to that player's value.

Game summary

A Sevens match report showing the Draft Payoff column and the Sevens instructions box

6.4 Posting to Discord

If your league has a Discord webhook configured, a "post to Discord" checkbox appears on the match report page. Depending on your league's settings, either commissioners only, or both participating coaches, can tick it to post a colour-coded result summary (with an optional notes section) to your league's Discord server when the report is saved. This should only be posted once — if you re-save the report later (for example to fix a mistake), it shouldn't be re-posted to Discord.

6.5 Bonus points

Depending on how your league's LeaguePref is configured, teams can automatically earn bonus points on top of a normal win/draw/loss — for example for a major win (scoring at least a set number of touchdowns), a clean sheet (conceding none), or racking up a set number of casualties. These are calculated automatically from the scoreline and casualty count you enter on the match report, using the thresholds and point values your league admin has set (Section 10).

7. Reference and Tools

The **Game Rules** menu is your reference library — no login required:

- **Rosters** — every current 2025 team roster, plus Teams of Legend, optional (Slann), and Sevens variants where enabled for your league.
- **Skills & Traits List** and **Star Players List**
- **Inducements** and **Prayers to Nuffle**
- **Pre & Post Match Sequence** and a **Cheat Sheet** of common tables — Sevens has its own versions of the kickoff, injury, and stunty-injury tables where your league has Sevens enabled.
- **Tournament Team Builder** — build a one-off roster for a tournament outside your league's normal budget/skill rules (session-only; produces a printable PDF roster). Handy for NAF tournament prep since it isn't tied to your league's team value or purchase history. Note: this tool has no format concept of its own and always uses standard Blood Bowl tiers/costs, even for Sevens-flavoured events.
- **Dice Probability Calculator** — works out success chances for actions using AG/PA target numbers, team re-rolls, Pro, Brawler, and Loner, including multi-action reroll sequencing. Marked as beta — treat results as a helpful estimate rather than a rules authority.

You'll also find links to the current official BB2025 FAQ/Errata and the NAF's own tournament clarifications document in this menu.

8. Statistics and League History

The **Statistics** menu gives standings for teams, players, coaches, races, and star players. The **League History** menu (where enabled by your league) adds:

- Gallery, Wanted (posters), Prize records, Hall of Fame, Famous Teams, and Memorable Matches
- A full list of past and current tournaments

EMPTY TABLES?

Statistics entries are compiled from played matches — a newly scheduled tournament won't show anything for a coach, team, or player until they've actually played a game in it.

Administrator Guide

9. Account Levels and Admin Access

There are three account levels in NAFLM:

Level	Can do
Coach	Submit match reports and manage teams in leagues they're assigned to.
League commissioner	Everything a coach can do, plus — within leagues they commission — schedule matches, view the site log, post front-page messages, and create coaches.
Global admin	Commissioner rights across all leagues, plus access to protected site-wide admin tools (User management, the NAFLM core panel).

Everything in Sections 10–20 below is reached from the **Admin** menu, which only appears in the top navigation once you're logged in with commissioner or global admin rights.

The Admin menu open, showing its full list of items

10. League Preferences (LeaguePref)

League Preferences is the single biggest admin page — almost every rule toggle for your league lives here, without needing to touch any PHP files. Reached via **Admin** → **League Preferences Administration**, after picking which league you're editing.

League Preferences Administration

The League Preferences Administration page, top section

Setting	What it does
League Name / Forum URL / Welcome Message / League Rules	Basic league identity text shown around the site.
Initial Treasury	Starting gold for new Blood Bowl-format teams.
Sevens Initial Treasury	Starting gold for new Sevens-format teams — set independently of the BB treasury above.
Minimum Team Value	Blocks any fire/sale that would drop a team's value below this floor.
Primary / Secondary Tournament	Which tournament(s) feed the league's front-page tables.
Core Theme / League CSS	Pick a built-in theme, or paste custom CSS to restyle the league's pages. Clear your browser cache after editing CSS.
Teams of Legend / Optional Rosters	Disable High Elf (Teams of Legend) and/or Slann (optional NAF roster) from the team creator. Doesn't affect teams already created with them.

Disable Match Auto-Lock	Off by default. NAFLM normally auto-locks a team's already-played matches in this league every time a new report is saved, so old reports can't be edited out from under later fixes (see Section 17). Turn this on to switch that off for this league. Doesn't affect Remove MNG/Unretire's own match lock (Section 16), which always applies regardless of this setting.
Sevens Team Rosters	Disable Sevens entirely from the team creator for this league. Doesn't affect existing Sevens teams.
Fire Under 11 Players	Allow firing below the normal 11-player floor.
Enforce Hire-Fire Order	Turns on the strict post-match hire → fire → buy → journeyman ordering described in Section 5.5.
Automated Random Skills / Stat Generator, Manual Random Skill Entry	Three related toggles controlling which of the skill/stat-improvement methods from Section 5.7 are offered. The help text warns not to disable the automated options unless manual entry is enabled instead.
Additional League Points	The bonus-point thresholds and values referenced in Section 6.5: Major Win TDs/Points, Clean Sheet Points, Major Beating CAS/Points. Requires a Ranking System that includes [bonus] .
Base Inducements Only	Restrict inducements to the main rulebook set.
Prayers to Nuffle Cost Override	Override the standard Prayers to Nuffle cost (0 = use standard).
Mega-Stars / Mega-Star Tax	Disable Mega-Stars outright, or add a flat surcharge to all Mega-Star hire costs.
Banned Star Players	A multi-select list of every Star Player in the game — ban specific stars regardless of Mega-Star status. Hold Ctrl/Cmd to select multiple.
Discord Webhook URL / Post Permission	Configure match-result posting to Discord (Section 6.4) and choose whether only admins, or admins and involved coaches, can trigger a post.

Discord webhook URL for posting match results:

(leave blank to disable Discord posting)

Discord Post Permission
Who can trigger a Discord post from the match report:

☒ Admins only: ☐ Admins and involved coaches:

The Banned Star Players multi-select and the Discord webhook fields at the bottom of League Preferences

SCOPE

League Preferences is set *per league* — if you run multiple NAFLM leagues on one install (as many hosts do), each has its own independent set of these settings.

11. Leagues, Divisions and Tournaments

Reached via **Admin** → **Leagues, divisions & tournaments**, which opens into three sub-pages — **League**, **Division**, and **Tournament** — each offering Create / Modify / Delete forms for that level of the hierarchy from Section 3.

DELETING IS DESTRUCTIVE

Deleting a league, division, or tournament that has actually been used deletes its associated data forever, including team and player stats gained in it, and can generate incorrect player statuses for later matches. It's meant for non-played, empty, or test tournaments only. After deleting any node, run **syncAll()** from the NAFLM core panel (Section 20) to re-synchronise. League and division deletion is restricted to global administrators.

On the Tournament form specifically, two checkboxes matter for day-to-day running:

- **Locked** — prevents any further scheduling in that tournament.
- **Coaches may schedule their own matches** — this is the setting that lets regular coaches use **Schedule Match** themselves (Section 6.1) for an FFA tournament; leave it unticked and only

admins/commissioners can schedule fixtures in it.

You also choose a **Ranking System** when creating or modifying a tournament — a small set of built-in formulas (e.g. 3 points for a win/2 for a draw/1 for a loss, tie-broken by touchdown difference) that determine standings order. Pick the one whose tie-break priorities match how your league wants to rank teams; #4–#6 are the ones that fold in the Additional League Points bonus from Section 10, via [bonus] .

Leagues, divisions & tournaments

Please note: When deleting any node (i.e. tournaments, divisions or leagues) a "syncAll()" re-synchronisation should be run afterwards from the [NAFLM core panel](#).

13. Scheduling Matches (Admin)

Reached via **Admin** → **Schedule matches**. This is the bulk scheduling tool available to admins and commissioners regardless of a tournament's self-scheduling setting. Three modes:

- **Free-For-All match** — schedule a single match in an existing FFA tournament.
- **Free-For-All tournament** — generate N games at once into an FFA tournament.
- **Round-Robin tournament** — seed (or re-seed) a full round-robin bracket with N games.

You also choose a **match type** (a plain numbered round, or a named playoff round such as Quarter-final/Semi-final/Final/3rd place playoff) and add the specific teams to include before generating fixtures.

14. User Management

Reached via **Admin** → **User management** (global admins only). This page covers:

- **Create new coach** — set login name, full name, optional email/phone, password, language, and both a **global** access level (global commissioner or regular coach) and an optional **local (league) access** level for a specific league at the same time.
- **Change local access level** — promote/demote a coach to local commissioner, regular coach, or remove their access, for one named league.
- **Mass user access changes** and **Change global access level** — the site-wide equivalent, for granting or revoking global commissioner rights.
- **Activate Users** — approve self-registered accounts (Section 2.1) that are waiting for admin sign-off. Shows "No coaches to activate!" when the queue is empty.
- **Display coach access levels** — look up what access a given coach currently has.
- **Change coach password** — reset a coach's password directly.

15. Coaches & Teams Management

Reached via **Admin** → **Coaches & teams management**. This page is intentionally narrow — it only covers the account-level lifecycle actions, not the in-team overrides (those live on each team's own page; see Section 17):

- **Retire team / Un-retire team**
- **Delete team**
- **Retire coach / Un-retire coach**
- **Delete coach**

PLEASE NOTE

For the sake of keeping league statistics intact, you are not allowed to delete teams or coaches which have played matches. Once retired, a coach cannot log in, and their teams are no longer manageable/editable from their team pages.

Coaches & teams management

Please note:

- For the sake of keeping league statistics intact you are not allowed to delete teams or coaches which have played matches.
- Once retired a coach cannot login and teams are no longer manageable/editable from their team pages.

16. Per-Team Admin Overrides

This is the section most worth knowing about: it isn't a separate admin page at all. Whenever a commissioner or global admin opens *any* team's own page, an extra **Admin tools** box appears on the Management & Stats tab, alongside that team's normal (coach-facing) management box. These overrides exist mainly for fixing mistakes and preventing cheating, without having to touch the database directly.

Team management – Test Humans

Rename team
▼

Description:

Rename your team.

Name:

Admin tools

Un-hire journeymen
▼

Description:

Regret permanently hiring a journeyman. This only works on players from a 0-16 allowed position on your team's roster.

Player:

3 Unnamed
▼

A team's page as seen by an admin, showing both the Team management box and the Admin tools box

Action	What it does
Un-hire journeymen	Reverses a permanent journeyman hire. Only works on players from a 0–16 allowed position on the team's roster.
Un-fire player	Reverses a player firing.
Un-buy team goods	Reverses a goods purchase a coach can't undo themselves once confirmed.
Gold bank	Directly adjust a team's treasury.
Manage extra player SPP	Add or remove SPP on a player directly, outside the normal match-report flow.
Manage extra player value	Add or remove value on a player directly. Note this does <i>not</i> also add SPP or a skill on its own — add those separately if the change should reflect an actual advancement.
Manage extra player skills	Grant a skill to a player directly. This does <i>not</i> add to the player's value on its own; add matching extra value separately if it should raise their value.
Remove ach. player skills	Take back a skill a player has already learned.
Manage player Hatred	Add or remove the Hatred trait between specific players, outside of roster-driven Hatred.
Manage team Dedicated Fans	Adjust a team's Dedicated Fans count directly.
Reset selected team league	Move a team's league assignment back, for correcting a mis-assignment.
Reset selected team special rule	Clear/reassign a team's special rule.
Reset selected team captain/veteran	Clear a team's captain (or Veteran, on Sevens) so it can be reassigned.
Transfer team	Move a team to another coach.
Remove / Add player niggle	Directly clear or grant a Niggling Injury on a player.
Remove player MNG/Unretire	Clear a Miss Next Game flag, or bring back a temporarily retired player, early. If the player's most recent match still shows an unresolved injury, this clears the block without erasing the injury's permanent effect on the player — see the note below.
Remove stat injuries	Clear a permanent characteristic injury (a negative stat modifier) from a player.

NAMING NOTE

A handful of these tools go by a slightly different label depending on how a team was set up — for example, whether "Fire player" appears in a team's own Team management box (as opposed to the equivalent admin override) depends on that team's current roster size and format floor, exactly as described in Section 5.4.

HOW REMOVE PLAYER MNG/UNRETIRE ACTUALLY CLEARS THE BLOCK

A player's status on their next match comes from whatever injury is recorded against them on the last match they played — not from a separate flag you can just switch off. So this tool looks at that last match and acts accordingly: a bare Miss Next Game entry is simply reset to no injury. If the last match instead shows a Niggling Injury or a permanent characteristic injury (MA/AV/AG/ST/PA), that entry is also reset to no injury for status purposes, but the injury's lasting effect on the player's stats and value is preserved by nudging the matching internal counter at the same time — so unblocking the player doesn't quietly erase a permanent injury they genuinely suffered. Because that fix only stays valid if that same match report is never re-entered afterward, using this tool automatically locks that match (Section 17) so the two coaches can't resubmit it and undo the fix — this lock always applies here, regardless of your league's Disable Match Auto-Lock setting (Section 10). "Remove MNG" and "Unretire" stay one combined tool rather than two, since a retired player's match-report status is hidden while they're retired anyway and only needs resolving once they're brought back.

17. Match Report Admin Controls

Commissioners and global admins get an extra **Admin** control row directly on each match report page (Section 6.2/6.3), alongside a **Download PDF report** link that's available to everyone:

- **Reset** — clears the report's entered figures so it can be re-entered from scratch, without deleting the fixture itself.
- **Delete** — removes the match entirely. Prefer this over asking a coach to try to "zero out" a bad report; as noted in Section 6.2, an incorrectly deleted *played* match still requires a follow-up `syncAll()` to keep stats consistent.
- **Lock** — freezes the report against further edits by the two coaches, once you're satisfied it's correct.
- **Change round** — move a match to a different round/match-type slot within its tournament.

MATCHES ALSO LOCK THEMSELVES AUTOMATICALLY

Beyond the manual Lock button above, NAFLM now locks matches on its own: whenever a report is saved, every match either team has already played earlier in that league gets locked automatically (the match just saved stays open, so it can still be corrected). This exists so that fixes made through admin tools like Remove player MNG/Unretire (Section 16), which depend on the state of a player's last-played match, can't be silently undone by a coach going back and resubmitting that old report. A league can turn this off via the Disable Match Auto-Lock setting in League Preferences (Section 10) — except for the lock Remove player MNG/Unretire itself applies, which always happens regardless of that setting.

18. The Random Roll Log

Reached via **Admin** → **Random Roll Log**, this page (titled "Random Roll History") keeps an audit trail of every random skill/stat roll generated across the league (Section 5.7), specifically to prevent coaches gaming random rolls by refreshing the page before confirming an unfavourable result. It lists, per roll: the player and team/coach, the roll type (skill or stat), what was offered, what was chosen, its status, and when it was generated and confirmed/cleared. Filter it by **Status** (All / Pending / Confirmed / Cleared by Admin), **Type** (All / Skill / Stat), and **Team**.

From this log, admins can also **clear a pending roll** directly — useful if a roll was generated in error — though that action can't be undone once a roll has been confirmed.

The Random Roll Log / Random Roll History page, with its filters and a populated table

ONLY APPEARS IF RANDOM ROLLS ARE SWITCHED ON

The Random Roll Log only shows up in the Admin menu when your league actually generates random skill/stat rolls — if every relevant toggle under Automated Random Skills/Stat Generator and Manual Random Skill Entry (Section 10) is turned off, there's nothing for the log to record, and the menu entry itself disappears along with it. If you're looking for it and can't find it, check those League Preferences settings first.

19. The NAFLM Core Panel

Reached via **Admin** → **NAFLM core panel** (global admins only). This is NAFLM's database maintenance and synchronisation control room:

NAFLM core panel

NAFLM database maintenance and synchronisation routines.

Database maintenance:

- Synchronise database with game data files. — Run this when having changed the PHP game data files `lib/game_data*.php`.
- Re-install database back-end procedures and functions. — Run this when having altered the "house ranking system" definitions in `settings.php`.
- Re-install table indices.

Database synchronisation:

- Update DB — Creates any missing tables and adds missing columns. Safe to run on existing installs.
- `syncAll()` — Synchronises all stats, relations and dynamic properties. This may take a few minutes!

Run it

The NAFLM core panel page

Tool	When to run it
Synchronise database with game data files	After changing the PHP game data files (<code>lib/game_data*.php</code>) — for example after a rules or roster update. Without this, the database won't pick up the changes.
Re-install database back-end procedures and functions	After altering the "house ranking system" definitions in <code>settings.php</code> .
Re-install table indices	Rebuilds table indices — occasionally needed after schema changes.
Update DB	Compares the live database against what the current codebase expects, and safely adds any missing tables or columns without touching existing data. Safe to run on an existing install; useful after installing an update that introduces new features.
<code>syncAll()</code>	Synchronises all stats, relations, and dynamic properties across the whole install. Can take a few minutes on a large league — and, as covered in Section 11, should be run after deleting any league/division/tournament node.

20. Installing or Upgrading NAFLM

To install from scratch: copy all files to your webserver, give your web server software write access to the installation's base directory, set your MySQL connection details in `settings.php`, then run `install.php` from a browser and follow the prompts. The project runs on PHP 5.6 with a MySQL/MariaDB backend.

To upgrade an existing install after pulling new code (for example a new season's rules or a NAF-published update): copy the new files over the old ones, then from the NAFLM core panel (Section 19) run, in order, **Synchronise database with game data files** (if `lib/game_data*.php` changed), **Update DB** to add any new tables/columns, then **Re-install database back-end procedures and functions** and **Re-install table indices**. Finish with a `syncAll()` if the update touched existing teams' stats or dynamic properties.

NAFLM 2025 — updated for the NAF by Val Catella. Source: github.com/The-NAF/NAFLM-2025. This guide reflects the site's current behaviour as observed on a local BB2025 test install; individual leagues may enable, disable, or configure features differently via League Preferences.
